INSIGHTS

▲ Render-blocking requests — Est savings of 740 ms

Requests are blocking the page's initial render, which may delay LCP. Deferring or inlining can move these network requests out of the critical path. LCP FCP Unscored

URL	Transfer size	Duration
ai.studio First Party	70.8 KiB	750 ms

▲ Network dependency tree

Avoid chaining critical requests by reducing the length of chains, reducing the download size of resources or deferring the download of unnecessary resources to improve page load LCP Unscored

Preconnected origins

preconnect hints help the browser establish a connection earlier in the page load, saving time when the first request for that origin is made. The following are the origins that the page preconnected to.

Origin	Source
https://fonts.googleapis.com/	head > link `<link rel="preconnect" href="https://fonts.googleapis.com">`
https://fonts.gstatic.com/	head > link `<link rel="preconnect" href="https://fonts.gstatic.com" crossorigin="">`

Preconnect candidates

Add preconnect hints to your most important origins, but try to use no more than 4

No additional origins are good candidates for preconnecting

Document request latency — Est savings of 6 KiB

Your first network request is the most important. Reduce its latency by avoiding redirects, ensuring a fast server response and enabling text compression. LCP FCP Unscored

- Avoids redirects
- Server responds quickly (observed 3 ms)
- No compression applied
